Problem Statement

Problem Statement

Build applications for a bus company that operates between Washington and New York City. In Washington it picks up and discharges passengers in Chinatown and at GWU. In New York it picks up and discharges passengers at Times Square and Madison Square Garden. Your database is to support ticket sales and scheduling and management of the fleet of buses. Seats are not reserved. There are two kinds of buses, some with 30 seats and some with 50 seats. You are to provide two applications, one for ordering and one for managing the service, such as changing schedules and changing the bus inventory.
